

TALVX13

OFFICIAL PROJECT DOCUMENT

Whitepaper

Pre-Launch Edition

Updated 7 September 2026
Base Mainnet - Planned launch

**TWELVE ANIMAL ARCHETYPES
THE MARKET AS THE THIRTEENTH ELEMENT**

Pre-launch authenticity notice: No official TALVX contract exists yet. Any token, pool, sale, "presale" or request to send funds using the TALVX13 name before the project publishes the creation transaction through its official channels is not official.

This document describes the intended TALVX13 project, launch structure and disclosure policy. It does not prove that the token, Creator Vault or Uniswap pool already exists. After creation and graduation, the corresponding on-chain records will be published and will take precedence over any descriptive text.

Pre-launch authenticity notice: No official TALVX contract exists yet. Any token, pool, sale, "presale" or request to send funds using the TALVX13 name before the project publishes the creation transaction through its official channels is not official.

The public Launch and Vault addresses identified in this edition are transparency and configuration records. They are not token-contract addresses, pool addresses or instructions to send ETH or tokens.

1. Overview

TALVX13 is a culture-driven crypto project built around twelve animal archetypes and the market itself as the thirteenth element.

Each animal represents recognizable behavior found throughout crypto: conviction, momentum, accumulation, hype, risk, patience, speed and survival. TALVX13 does not promise outcomes. It provides a visual language for observing behavior behind the market.

The market is not a thirteenth animal. It is the environment that challenges, connects and reveals the instincts represented by all twelve animals. This relationship between twelve archetypes and one market completes the TALVX13 identity.

The project combines culture, education and informational tools intended to encourage more conscious interaction with crypto markets.

Before the Click helps users review available market, liquidity and risk context before interacting with a token. **Meme Mode Live** visualizes scan attention without endorsing any asset. **Proof of Animal** provides a symbolic community-participation experience. **Infinite Market** is an educational decision simulator using virtual balances and fictional scenarios. **Market Decode** translates user-selected market conditions into the symbolic language of the twelve animals.

TALVX13 (**TALVX**) is the planned fixed-supply token of this ecosystem.

2. Token Identity and Network

Item	Pre-launch specification
Project and token name	TALVX13
Ticker	TALVX
Network	Base Mainnet
Chain ID	8453
Token standard	ERC-20 issued by the Base.meme Factory
Total supply	1,000,000,000 TALVX
Bonding-curve pair	TALVX / ETH on Base
Post-graduation market	Uniswap V4
Token-level buy tax	0%
Token-level sell tax	0%

The selected launch structure uses a fixed total supply of **1,000,000,000 TALVX**. The final contract, supply, decimals and relevant contract permissions will be checked directly from the deployed contract and published at launch.

The 0% buy-tax and 0% sell-tax policy refers only to taxes built into TALVX itself. Base network gas, Base.meme trading fees, Uniswap fees, seeding fees and platform reward mechanisms are separate and may apply under the platform rules in force when a transaction occurs.

Creating the total supply does not mean that the full supply becomes freely circulating at once. Curve tokens enter holder circulation through public purchases, liquidity tokens are committed to the automated market, and Creator Vault tokens remain subject to the on-chain release schedule.

3. Public Launch Structure

TALVX13 is planned to launch on **Base Mainnet** through **Base.meme Advanced Mode**, using ETH as the bonding-curve collateral.

There is no planned private sale. Trading begins through the public bonding curve, where participants interact under the same visible pricing mechanism. Purchases remain speculative and do not guarantee profit, liquidity, graduation or continued market demand.

This pre-launch edition announces no launch date, deadline or countdown. An official purchase link will be published only after the TALVX creation transaction exists and the contract address has been verified through the official channels listed in this document.

The selected bonding-curve graduation target is **2.5 ETH**. This is the collective curve target, not a creation fee, a required personal contribution by the creator, guaranteed Treasury income or guaranteed market capitalization.

On Base.meme Advanced Mode, Pool Migration is fixed at 20%. Bonding Curve plus Creator Vault must equal 80%. The selected **60% / 20% / 20%** split fits that rule.

When the curve reaches its target, the intended platform process automatically migrates the designated liquidity allocation and eligible net collateral into a **TALVX/ETH Uniswap V4 market**. Base.meme documents its migrated liquidity as permanently locked. The project will publish the actual migration transaction, pool address and lock evidence after graduation.

The 2.5 ETH figure is the bonding-curve funding target. It is not the amount that remains in the Uniswap pool. Base.meme charges an Advanced Mode seeding fee equal to **6% of the funding target**, currently **0.15 ETH** on a 2.5 ETH raise. Eligible net collateral after that fee is what seeds the TALVX/ETH Uniswap V4 market.

Base.meme also charges platform trading fees during the bonding-curve phase and after graduation. Under the published platform rules for coins created on or after 5 December 2025, that trading fee is **2%**. Those fees are separate from the 0% token-level buy and sell tax.

No graduation date is promised. Until graduation occurs, no Uniswap V4 pool address or final migration timestamp exists to publish.

Base.meme is an independent platform built on the Base network and is not affiliated with Coinbase or the Base team.

4. Planned Token Allocation

The following distribution is a pre-launch plan. It becomes an on-chain fact only after the creation transaction is confirmed and its deployed parameters are publicly verified.

Allocation	Share	TALVX amount	Purpose
Public Bonding Curve	60%	600,000,000	Progressive public distribution through curve purchases
Automatic Liquidity	20%	200,000,000	Automatic migration to the TALVX/ETH Uniswap V4 market after graduation
Creator Vault	20%	200,000,000	Locked allocation for Community, Treasury, development and Team purposes
Total	100%	1,000,000,000	

Creator Vault internal policy

The Creator Vault is one on-chain allocation with one public beneficiary address and one shared release schedule. The project records the following intended use within that 20% allocation:

Intended use	Share of total supply	TALVX amount
Community & Ecosystem	8%	80,000,000
Treasury & Development	7%	70,000,000
Team	5%	50,000,000
Creator Vault total	20%	200,000,000

These three categories are an internal public allocation policy inside the single Creator Vault. They are not three separate vault contracts, three on-chain spending limits, or three immediately spendable balances. The on-chain vault enforces one recipient and one schedule only.

There is no separate airdrop allocation. Any future community campaign or contributor program must use available Community & Ecosystem tokens, follow the vault schedule and be disclosed separately before distribution.

5. Planned Creator Vault Release Policy

The selected policy is designed to prevent the 200,000,000 TALVX Creator Vault allocation from becoming freely available at launch.

Stage	Intended access
Token launch and bonding-curve phase	No immediate Creator Vault release
After graduation / migration	Lockup begins
Initial lockup	180 days with zero vault tokens claimable
Linear vesting	Gradual release over the following 540 days
Schedule completion	Full vault allocation released according to the on-chain schedule

The intended schedule is:

- Immediate vault unlock: **0 TALVX**.
- Lockup / cliff: **180 days after graduation**.
- Linear vesting after the lockup: **540 days**.
- Combined schedule: **720 days after graduation**.

The public beneficiary address does not hold the full 200,000,000 TALVX as a freely transferable balance at launch. The vault strategy contract is intended to enforce when tokens become claimable.

The Vault Recipient must be set in the Advanced creation form to the published TALVX13 Vault address. If that field is left on the default creator wallet, the 200,000,000 TALVX release rights attach to the Launch address instead.

Exact start, cliff-end and final-release timestamps depend on the finalized on-chain configuration. The project will publish those timestamps and the Creator Vault contract after token creation. If the interface or final transaction differs from this stated schedule, the discrepancy must be disclosed before presenting the launch as compliant with this edition.

Unlocked tokens are not automatically sold. Release only makes the scheduled amount claimable. Any later use or transfer remains visible on-chain and must remain consistent with the disclosed Community, Treasury and Team purposes.

6. Public Project Addresses

The following Base Mainnet addresses were supplied by the project for the planned launch. Both are public EVM addresses. Their inclusion does not disclose any private key or recovery secret.

TALVX13 Launch

- Network: **Base Mainnet**.
- Intended role: connect to Base.meme, create TALVX13 and perform authorized launch operations.
- Address: [0xbF1735FE1a6ab92f40Af13Dd8518020EcED24BD1](https://base.meme/address/0xbF1735FE1a6ab92f40Af13Dd8518020EcED24BD1)

TALVX13 Vault

- Network: **Base Mainnet**.
- Intended role: public beneficiary / Vault Recipient for the 20% Creator Vault.
- Address: [0x6A9c9dbC8a0D453A6142BD51e764094fd5b7b317](https://base.meme/address/0x6A9c9dbC8a0D453A6142BD51e764094fd5b7b317)

This Vault address must be entered in the Base.meme Advanced **Vault Recipient** field at creation. It is not applied automatically just because it appears in this document.

Neither published project wallet is the official TALVX token contract or a TALVX/ETH pool. Publishing these wallets is not a request for payment. TALVX13 has no pre-launch token sale or presale, and the public should not send ETH or tokens to either address to purchase TALVX.

Addresses created later

Record	Current status
Official TALVX token contract	To be published immediately after creation
Base.meme launch page	To be published immediately after creation
Creator Vault contract / vesting record	To be published after creation and verified against the selected schedule
TALVX/ETH Uniswap V4 pool	To be published after graduation
Graduation and migration transaction	To be published after graduation
Seeding-fee amount shown at signing	To be confirmed on the final wallet screen and disclosed if different from 0.15 ETH

No placeholder address should ever be represented as the official TALVX contract or pool.

7. Ecosystem and Product Purpose

Before the Click

Before the Click is an automated crypto-awareness tool. It translates available public market data and external signals into simplified metrics, animal behavior archetypes and review summaries.

Users paste a supported token contract address or pair link, run a scan, read the dominant and supporting signals, and review detailed warnings before acting. Source resolution and coverage depend on available data.

The four core metrics are:

Metric	Intended interpretation
Risk	Visible market and warning context that deserves caution; a low score does not establish safety
Hype / FOMO	Attention, momentum and speculative behavior; high attention is not a recommendation
Liquidity Score	Visible trading-liquidity context, including the possibility of slippage and difficult exits
Data Confidence	Availability and usability of data, not certainty about legitimacy or future performance

Animal Score is a behavior breakdown. The Dominant Signal remains the primary interpretation; supporting and secondary archetypes add context. Animals are metaphors, not price forecasts.

Examples include:

- Snake + Rat: caution, thin liquidity or other early-risk context.
- Rabbit + Tiger: fast movement and volatility.
- Monkey + Tiger: hype and speculative momentum.
- Dragon + Snake: major or wrapped-asset context requiring source confirmation.
- Goat + Horse: comparatively mature-market and momentum context.

Safety Summary uses review labels such as CHECK, VERIFY and HIGH RISK. They highlight context and warnings; they do not verify or endorse a token. Missing data must not be translated into a safe conclusion.

Meme Mode Live

Meme Mode Live visualizes attention generated by scans. It is **trending by scans, not by endorsement**.

An expanded signal card may show a stored market snapshot: price, liquidity, volume, price changes, market/pool age, transaction counts, buyer and seller counts, market capitalization and FDV when available.

MARKET AGE means market/pool age, not independently verified contract-creation age. Buyers and sellers are not interchangeable with the number of buy and sell transactions. Historical snapshot values are not guaranteed to remain current.

Opening or expanding a card is intended to reuse saved scan data rather than trigger fresh provider calls. Missing fields should be omitted rather than invented as zero. Provider attribution is retained where applicable.

Proof of Animal

Proof of Animal is a symbolic community-participation experience. A user selects one of the twelve animal archetypes, provides a public handle and a short story, and can generate a shareable Animal Proof Card. A limited number of profiles may be highlighted during each Bubble Reveal cycle.

Highlighting is editorial and cultural. It does not rank wallets, create eligibility or imply token distribution. Participation does not prove identity, ownership, wallet activity or on-chain status. Handles are not independently verified, selection is not guaranteed, and submitted content may be moderated and publicly displayed. Proof of Animal does not provide a token, prize, whitelist position, airdrop or financial benefit.

Infinite Market Simulator

Infinite Market is an educational decision simulator designed to explore discipline, risk exposure and emotional reactions to market narratives. Users begin with a virtual balance, make choices in fictional scenarios, receive simulated consequences and may appear in symbolic rankings such as the Throne or Hall of Losers.

Infinite Market does not use real money or execute real trades. Its scenarios, balances, outcomes and rankings are educational and symbolic. Rankings use simulated scores only and have no cash, token or whitelist value. It is not real-market analysis, backtesting, a trading system, an artificial-intelligence forecast or proof of a profitable strategy.

Market Decode

Market Decode is a symbolic interpretation tool. A user selects between two and five perceived market conditions and receives an interpretive reading through the language of the twelve animal archetypes, together with a shareable visual card.

Market Decode does not read real-time prices, on-chain activity or the user's wallet. Its input is the user's subjective perception, and its output is interpretive rather than predictive. Shareable cards are cultural artifacts, not price charts or trading signals. Market Decode is not a market indicator, trading signal or financial recommendation.

Relationship to TALVX

Holding TALVX is not required to use the tools and experiences described in this section.

None of these tools currently distributes TALVX, prizes or financial rewards. TALVX does not promise returns, ownership, revenue sharing, voting rights or guaranteed access. Its current planned role is cultural and community-driven. Future integrations may be explored but are not promised.

8. Roadmap

- 1 Public Pre-Launch Foundation:** publish the website, this pre-launch whitepaper, the twelve-animal identity, the market as the thirteenth element, public tools and official channels.
- 2 Community and Culture:** build awareness through educational content, scans, cards, Proof of Animal, Telegram, X and other disclosed community initiatives.
- 3 Base Launch:** create TALVX13 through the selected Base.meme configuration when the project is ready, without promising a launch date or countdown, and publish the verified contract, Base.meme link and creation transaction on the same day.
- 4 Post-Launch Development:** continue Before the Click, Meme Mode Live, Infinite Market, Market Decode and cultural initiatives while publishing the required on-chain vault, graduation and liquidity records.

This roadmap describes intended direction. It does not guarantee delivery dates, listings, fundraising, graduation, price performance or commercial results.

9. Transparency Commitments

Before signing the launch transaction

- Reconfirm the connected wallet is the published TALVX13 Launch address.
- Reconfirm Base Mainnet, ETH pair and Base.meme Factory ERC-20 configuration.
- Reconfirm total supply of 1,000,000,000 TALVX.
- Reconfirm Advanced Mode and the final 60% curve / 20% liquidity / 20% Creator Vault distribution.
- Reconfirm the 2.5 ETH graduation target.
- Reconfirm 0% token-level buy and sell tax.
- Reconfirm the Vault Recipient field is `0x6A9c9dbC8a0D453A6142BD51e764094fd5b7b317`, not the Launch address.
- Reconfirm the 180-day lockup, 540-day linear vesting and zero immediate release.
- Reconfirm the visible seeding fee on the final signing screen before approving the transaction.
- Read the final wallet transaction before signing; no screenshot or draft replaces the signed on-chain parameters.

Immediately after token creation

- Publish the official TALVX contract address and Base.meme launch link.
- Publish the creation transaction and fixed-supply evidence.
- Publish the Creator Vault contract or vesting record, allocation, recipient and schedule evidence.
- Confirm on-chain that the Vault Recipient is the published TALVX13 Vault address.
- Compare all deployed parameters with this document and disclose any discrepancy.

After graduation

- Publish the Uniswap V4 pool and migration transaction.
- Publish the platform's liquidity-lock evidence.
- Publish the actual vault schedule timestamps.
- Disclose the actual ETH amount seeded into the pool after the seeding fee.
- Keep Community, Treasury, development and Team communications consistent with the disclosed 8% / 7% / 5% internal policy.

10. Official Channels

- Website: talvx13.com
- Telegram: [@talvx13](https://t.me/talvx13)
- X: [@Talvx13](https://twitter.com/Talvx13)
- Email: contact@talvx13.com

Only information published through these channels and verified against the correct on-chain addresses should be treated as an official TALVX13 update.

Pre-launch authenticity warning

No official TALVX contract exists yet. Any token, pool or "presale" using the TALVX13 name before the creation transaction is published through the official channels above is not official.

The TALVX13 Launch and Vault wallet addresses are published for transparency. They are not payment instructions and must never be confused with the future token contract or Uniswap pool.

11. Responsibility and Disclaimer

TALVX13, Before the Click, Meme Mode Live, Proof of Animal, Infinite Market and Market Decode are informational, educational or cultural offerings. Nothing in this document, the website or official channels constitutes financial, investment, trading, legal or tax advice.

The project does not recommend buying, selling, holding, connecting a wallet, signing a transaction or interacting with any particular token, contract, website or protocol.

Before the Click is not a token-verification or endorsement system and is not a guaranteed rug-pull detector. Risk, Hype/FOMO, Liquidity Score, Data Confidence, animals and Safety Summary are simplified indicators, never guarantees of safety, legitimacy, liquidity or future performance.

Proof of Animal is symbolic participation only. It does not establish identity, ownership, eligibility, on-chain proof or entitlement to a token, prize, whitelist, airdrop or financial benefit. Editorial highlighting during Bubble Reveal is cultural and does not create ranking, eligibility or distribution rights.

Infinite Market uses fictional scenarios and virtual balances. Its rankings use simulated scores only and have no cash, token or whitelist value. Market Decode uses conditions selected by the user and does not analyze real-time market data. Neither tool executes trades, predicts prices or provides trading signals.

Public data and provider signals may be incomplete, delayed, incorrect, unavailable or inconsistent. High confidence in data availability is not proof that a token is safe.

Digital assets, especially newly launched tokens, memecoins, thin-liquidity markets and hype-driven assets, can involve sudden losses, failed sales, slippage, scams or total loss. Fixed supply, locked liquidity and vesting reduce specific risks but do not eliminate market, contract, platform, operational or regulatory risk.

Users remain responsible for their decisions and for checking addresses, sources, liquidity, holder distribution, sellability and relevant warnings.

Never invest money you cannot afford to lose.

Before every click, verify the source.
